> Hands free weigh bagging solution for your laundry needs

The Rennco ProPick system is ideal for bagging washcloths, bar wipes, micro-fibers and more.

The customer sling dispenses clean items into the stainless steel hopper area. The items are then transported up the vertical conveyor onto to a horizontal belt scale conveyor. The horizontal conveyor advances gradually until the correct weight is achieved and then advances at full speed to load the correct weight of items into the film. The package is produced and then discharged for transport to the end user.

FEATURES AND BENEFITS

- Simple, fast and efficient
- No operator required – "Go Hands Free"
- Bags up to 24" wide x 27" tall
- Utilizes centerfolded poly versus pre-made bags
- Variable bag length based on products
- Single or Dual arrangement
- Easily retrofits to existing hand load systems
